Author notes

Wolde Gebreyesus is affiliated with Department of Mechanical Engineering, Gondar University and focuses on Engineering research in Africa.

Georges Tessew is affiliated with Department of Mechanical Engineering, Haramaya University and focuses on Engineering research in Africa.

Fasil Desta is affiliated with Department of Electrical Engineering, Bahir Dar University and focuses on Engineering research in Africa.

Abstract

This study addresses a current research gap in Engineering concerning Methodological evaluation of power-distribution equipment systems in Ethiopia: quasi-experimental design for measuring cost-effectiveness in Ethiopia. The objective is to formulate a rigorous model, state verifiable assumptions, and derive results with direct analytical or practical implications. A mixed-methods design was used, combining survey and interview data collected over the study period. The results establish bounded error under perturbation, a convergent estimation process under stated assumptions, and a stable link between the proposed metric and observed outcomes. The findings provide a reproducible analytical basis for subsequent theoretical and applied extensions. Stakeholders should prioritise inclusive, locally grounded strategies and improve data transparency. Methodological evaluation of power-distribution equipment systems in Ethiopia: quasi-experimental design for measuring cost-effectiveness, Ethiopia, Africa, Engineering, intervention study This work contributes a formal specification, transparent assumptions, and mathematically interpretable claims. The maintenance outcome was modelled as $Y = \beta_0 + \beta_1 X + u_i + \text{varepsilon}$, with robustness checked using heteroskedasticity-consistent errors.

Keywords: Ethiopia, Geographic Focus, Quasi-Experimental Design, Methodological Evaluation, Power-Distribution Systems, Cost-Effectiveness Analysis, Technological Integration
