Author notes

Mekuria Yohannes is affiliated with Department of Electrical Engineering, Jimma University and focuses on Engineering research in Africa.

Yilma Woldetsadik is affiliated with Department of Sustainable Systems, Africa Centers for Disease Control and Prevention (Africa CDC), Addis Ababa and focuses on Engineering research in Africa.

Abiy Abera is affiliated with Department of Electrical Engineering, Ethiopian Public Health Institute (EPHI) and focuses on Engineering research in Africa.

Abstract

This study addresses a current research gap in Engineering concerning Methodological evaluation of water treatment facilities systems in Ethiopia: panel-data estimation for measuring risk reduction in Ethiopia. The objective is to formulate a rigorous model, state verifiable assumptions, and derive results with direct analytical or practical implications. A structured analytical approach was used, integrating formal modelling with domain evidence. The results establish bounded error under perturbation, a convergent estimation process under stated assumptions, and a stable link between the proposed metric and observed outcomes. The findings provide a reproducible analytical basis for subsequent theoretical and applied extensions. Stakeholders should prioritise inclusive, locally grounded strategies and improve data transparency. Methodological evaluation of water treatment facilities systems in Ethiopia: panel-data estimation for measuring risk reduction, Ethiopia, Africa, Engineering, short report This work contributes a formal specification, transparent assumptions, and mathematically interpretable claims. The maintenance outcome was modelled as $Y\{\}=beta0+beta1X\{\}+ui+varepsilon\{\}$, with robustness checked using heteroskedasticity-consistent errors.
