Abstract

Mobile health clinics have been increasingly recognised as a critical tool in addressing healthcare disparities, particularly in underserved regions such as Ghanaian villages. Theoretical, employing qualitative and quantitative analysis of existing literature on maternal and child healthcare policies and outcomes in Ghanaian villages. This framework underscores the importance of integrating mobile health services into existing healthcare systems to address regional disparities effectively. Policy makers should prioritise funding and infrastructure support for mobile clinics in underserved areas, with a focus on training local providers and ensuring consistent supply chain management.

Keywords: *Sub-Saharan, maternal health, child mortality, community engagement, healthcare access, mobile interventions, spatial analysis*

ABSTRACT-ONLY PUBLICATION

This is an abstract-only publication. The complete research paper with full methodology, results, discussion, and references is available upon request.
