## **Author notes**

*Sipho Mkhize is affiliated with African Institute for Mathematical Sciences (AIMS) South Africa and focuses on Education research in Africa.*

*Bongani Sithole is affiliated with Department of Advanced Studies, University of Pretoria and focuses on Education research in Africa.*

*Mpho Setswe is affiliated with Department of Advanced Studies, Rhodes University and focuses on Education research in Africa.*

*Nomathemba Dlamini is affiliated with University of Pretoria and focuses on Education research in Africa.*

## **Abstract**

Technological innovations have been increasingly integrated into early childhood education (ECE) programmes in South Africa's urban centers as a response to educational challenges and resource constraints. The analysis will draw from existing literature and expert testimonies to develop a comprehensive model for evaluating the effectiveness of technology in early childhood education settings. The theoretical framework provides foundational insights into how technology can be effectively integrated into ECE evaluations and highlights critical areas for future empirical research and policy formulation. Future studies should prioritise the evaluation of long-term educational outcomes and explore scalability of technology solutions across diverse urban contexts in South Africa.
