Abstract

The gender-based microfinance interventions in Côte d'Ivoire have been a subject of interest for their potential to empower female-owned businesses. The analysis employs secondary data from microfinance institutions in Côte d'Ivoire, analysing business performance metrics such as revenue growth and debt levels. This study underscores the effectiveness of gender-based microfinance interventions in enhancing the financial health and resilience of Côte d'Ivoire's female entrepreneurs. Further research should explore the long-term effects and scalability of these interventions, particularly in communities with diverse economic conditions.
