Abstract

Land reform initiatives have been implemented in various African countries to address issues of land inequality and poverty. The analysis is based on secondary data from government reports, academic journals, and international organizations, providing a comprehensive overview of the reforms' implementation and outcomes. A key finding indicates that in East Africa, land redistribution led to an increase in smallholder farmers' income by 15% within two years post-reform. The study concludes that while Egypt's land reform has had a more mixed impact due to its different socio-economic context, the East African reforms have shown significant benefits for rural populations. Policy makers in similar contexts should consider implementing targeted support programmes alongside land redistribution to maximise positive impacts on vulnerable groups. Land Reform, Socio-Economic Impacts, Egypt, East Africa

Keywords: *African geography, land tenure systems, agrarian reforms, socioeconomic indicators, comparative methodology, development studies, historical economics*
