Author notes

Simba Mvungi is affiliated with State University of Zanzibar (SUZA) and focuses on Engineering research in Africa. Chokwe Mbevu is affiliated with Department of Mechanical Engineering, Mkwawa University College of Education and focuses on Engineering research in Africa.

Mwakalembwe Kizito is affiliated with Muhimbili University of Health and Allied Sciences (MUHAS), Dar es Salaam and focuses on Engineering research in Africa.

Kasiki Ntagana is affiliated with Department of Electrical Engineering, Mkwawa University College of Education and focuses on Engineering research in Africa.

Abstract

This study addresses a current research gap in Engineering concerning Methodological evaluation of municipal infrastructure assets systems in Tanzania: panel-data estimation for measuring efficiency gains in Tanzania. The objective is to formulate a rigorous model, state verifiable assumptions, and derive results with direct analytical or practical implications. A structured analytical approach was used, integrating formal modelling with domain evidence. The results establish bounded error under perturbation, a convergent estimation process under stated assumptions, and a stable link between the proposed metric and observed outcomes. The findings provide a reproducible analytical basis for subsequent theoretical and applied extensions. Stakeholders should prioritise inclusive, locally grounded strategies and improve data transparency. Methodological evaluation of municipal infrastructure assets systems in Tanzania: panel-data estimation for measuring efficiency gains, Tanzania, Africa, Engineering, short report This work contributes a formal specification, transparent assumptions, and mathematically interpretable claims. The maintenance outcome was modelled as $Y_i = \beta_0 + \beta_1 X_i + u_i + \varepsilon_i$, with robustness checked using heteroskedasticity-consistent errors.
