Author notes

Mohammed Mekki is affiliated with Department of Mechanical Engineering, Sidi Mohamed Ben Abdellah University, Fez and focuses on Engineering research in Africa.

Said Bouzid is affiliated with Institut National de Recherche Halieutique (INRH) and focuses on Engineering research in Africa.

Abdelatif El Amrani is affiliated with Department of Sustainable Systems, Sidi Mohamed Ben Abdellah University, Fez and focuses on Engineering research in Africa.

Ahmed Benslimane is affiliated with Al Akhawayn University in Ifrane and focuses on Engineering research in Africa.

Abstract

This study addresses a current research gap in Engineering concerning Chemical Engineering Processes for Local Resource Utilization in Phosphate Production in Morocco in Morocco. The objective is to formulate a rigorous model, state verifiable assumptions, and derive results with direct analytical or practical implications. A structured analytical approach was used, integrating formal modelling with domain evidence. The results establish bounded error under perturbation, a convergent estimation process under stated assumptions, and a stable link between the proposed metric and observed outcomes. The findings provide a reproducible analytical basis for subsequent theoretical and applied extensions. Stakeholders should prioritise inclusive, locally grounded strategies and improve data transparency. Chemical Engineering Processes for Local Resource Utilization in Phosphate Production in Morocco, Morocco, Africa, Engineering, methodology paper This work contributes a formal specification, transparent assumptions, and mathematically interpretable claims. The maintenance outcome was modelled as $Y\{\} = beta\,0 + beta\,1\,X\{\} + ui + varepsilon\{\}$, with robustness checked using heteroskedasticity-consistent errors.

Keywords: *North Africa, Moroccan contexts,* □□□□*, process integration, resource efficiency, sustainable engineering, green chemistry*
