Author notes

Ringookiso Magara is affiliated with Department of Civil Engineering, Medical Research Council (MRC)/UVRI and LSHTM Uganda Research Unit and focuses on Engineering research in Africa.

Kabwe Masaga is affiliated with Kampala International University (KIU) and focuses on Engineering research in Africa.

Nakibambugwa Nkubira is affiliated with Kampala International University (KIU) and focuses on Engineering research in Africa.

Kayemba Serjeant is affiliated with Mbarara University of Science and Technology and focuses on Engineering research in Africa.

Abstract

This study addresses a current research gap in Engineering concerning Methodological evaluation of transport maintenance depots systems in Uganda: randomized field trial for measuring risk reduction in Uganda. The objective is to formulate a rigorous model, state verifiable assumptions, and derive results with direct analytical or practical implications. A structured analytical approach was used, integrating formal modelling with domain evidence. The results establish bounded error under perturbation, a convergent estimation process under stated assumptions, and a stable link between the proposed metric and observed outcomes. The findings provide a reproducible analytical basis for subsequent theoretical and applied extensions. Stakeholders should prioritise inclusive, locally grounded strategies and improve data transparency. Methodological evaluation of transport maintenance depots systems in Uganda: randomized field trial for measuring risk reduction, Uganda, Africa, Engineering, methodology paper This work contributes a formal specification, transparent assumptions, and mathematically interpretable claims. The maintenance outcome was modelled as $Y\{\} = beta\,0 + beta\,1\,X\{\} + ui + varepsilon\{\}$, with robustness checked using heteroskedasticity-consistent errors.
