Abstract

This study addresses a current research gap in Agriculture concerning Methodological evaluation of smallholder farms systems in Senegal: difference-in-differences model for measuring yield improvement in Senegal. The objective is to formulate a rigorous model, state verifiable assumptions, and derive results with direct analytical or practical implications. A structured analytical approach was used, integrating formal modelling with domain evidence. The results establish bounded error under perturbation, a convergent estimation process under stated assumptions, and a stable link between the proposed metric and observed outcomes. The findings provide a reproducible analytical basis for subsequent theoretical and applied extensions. Stakeholders should prioritise inclusive, locally grounded strategies and improve data transparency. Methodological evaluation of smallholder farms systems in Senegal: difference-in-differences model for measuring yield improvement, Senegal, Africa, Agriculture, replication study This work contributes a formal specification, transparent assumptions, and mathematically interpretable claims. The empirical specification follows $Y = \beta_{0+\beta}^{\rightarrow} p\, X + varepsilon,$ and inference is reported with uncertainty-aware statistical criteria.

Keywords: *African agriculture, smallholder farming systems, yield assessment, econometrics, impact evaluation, randomized controlled trials, longitudinal studies*
