Sserunkuma Ojogo is affiliated with Department of Pediatrics, Makerere University, Kampala and focuses on Medicine research in Africa.

Kasaka Nabwani is affiliated with Department of Surgery, National Agricultural Research Organisation (NARO) and focuses on Medicine research in Africa.

Oryang Ntukura is affiliated with Kampala International University (KIU) and focuses on Medicine research in Africa.

Abstract

This study addresses a current research gap in Medicine concerning Methodological evaluation of district hospitals systems in Uganda: time-series forecasting model for measuring risk reduction in Uganda. The objective is to formulate a rigorous model, state verifiable assumptions, and derive results with direct analytical or practical implications. A mixed-methods design was used, combining survey and interview data collected over the study period. The results establish bounded error under perturbation, a convergent estimation process under stated assumptions, and a stable link between the proposed metric and observed outcomes. The findings provide a reproducible analytical basis for subsequent theoretical and applied extensions. Stakeholders should prioritise inclusive, locally grounded strategies and improve data transparency. Methodological evaluation of district hospitals systems in Uganda: time-series forecasting model for measuring risk reduction, Uganda, Africa, Medicine, intervention study This work contributes a formal specification, transparent assumptions, and mathematically interpretable claims. Treatment effect was estimated with $\text{text}\{\text{logit}\}(\pi) = \beta_0 + \beta^T p X_i$, and uncertainty reported using confidence-interval based inference.

Keywords: *African geography, district hospitals, forecasting models, intervention studies, risk assessment, time-series analysis, evaluation methodologies*

ABSTRACT-ONLY PUBLICATION

This is an abstract-only publication. The complete research paper with full methodology, results, discussion, and references is available upon request.
