### Author notes

Oscar Mwangi Ngugi is affiliated with University of Nairobi and focuses on Computer Science research in Africa.

### Abstract

This study addresses a current research gap in Computer Science concerning Innovative Educational Apps for Gender-Specific Skill Development in Nairobi Slums in Kenya. The objective is to formulate a rigorous model, state verifiable assumptions, and derive results with direct analytical or practical implications. A structured analytical approach was used, integrating formal modelling with domain evidence. The results establish bounded error under perturbation, a convergent estimation process under stated assumptions, and a stable link between the proposed metric and observed outcomes. The findings provide a reproducible analytical basis for subsequent theoretical and applied extensions. Stakeholders should prioritise inclusive, locally grounded strategies and improve data transparency. Innovative Educational Apps for Gender-Specific Skill Development in Nairobi Slums, Kenya, Africa, Computer Science, working paper This work contributes a formal specification, transparent assumptions, and mathematically interpretable claims. Model estimation used  $\hat{\theta} = \operatorname{argmin} \{ \theta \} \operatorname{sumiell} ( y_i, f\theta ( \xi ) ) + \lambda \operatorname{Vert} \theta \operatorname{rVert} 2^2$ , with performance evaluated using out-of-sample error.
