Felix Uzoma Okezie is affiliated with Department of Internal Medicine, University of Nigeria, Nsukka and focuses on Medicine research in Africa.

Uchechukwu Obiora Ezeanyaohiamwen is affiliated with University of Nigeria, Nsukka and focuses on Medicine research in Africa.

Chimere Chukwuka Nwanisbelie is affiliated with University of Nigeria, Nsukka and focuses on Medicine research in Africa.

Abstract

Migrants in Nigerian informal settlements often face significant challenges accessing essential healthcare services and medication supplies. A systematic review of existing studies focusing on migrants' experiences in Nigerian informal settlements. Analysis revealed that migrant populations are disproportionately affected by shortages of medication supplies (40% reported such issues), while also facing challenges with health service accessibility (35% reported difficulties). Migrants face substantial barriers to accessing healthcare and medication in Nigerian informal settlements, necessitating targeted interventions. Implementing community-based health programmes and expanding outreach services can improve access for migrants. Monitoring and evaluation of these initiatives are crucial for effectiveness. Treatment effect was estimated with $\text{text}\{\text{logit}\}(\pi) = \beta_0 + \beta_1 X_i$, and uncertainty reported using confidence-interval based inference.
