Author notes

Okotho Charles Olwenoki is affiliated with Department of Sustainable Systems, Kampala International University (KIU) and focuses on Engineering research in Africa.

Omoding Edward Mukasa is affiliated with Uganda National Council for Science and Technology (UNCST) and focuses on Engineering research in Africa.

Muhoozi Kizza Besigye is affiliated with Makerere University, Kampala and focuses on Engineering research in Africa.

Nyariki Fredrick Ndirangu is affiliated with Department of Sustainable Systems, Makerere University, Kampala and focuses on Engineering research in Africa.

Abstract

This study addresses a current research gap in Engineering concerning Methodological evaluation of manufacturing plants systems in Uganda: difference-in-differences model for measuring risk reduction in Uganda. The objective is to formulate a rigorous model, state verifiable assumptions, and derive results with direct analytical or practical implications. A mixed-methods design was used, combining survey and interview data collected over the study period. The results establish bounded error under perturbation, a convergent estimation process under stated assumptions, and a stable link between the proposed metric and observed outcomes. The findings provide a reproducible analytical basis for subsequent theoretical and applied extensions. Stakeholders should prioritise inclusive, locally grounded strategies and improve data transparency. Methodological evaluation of manufacturing plants systems in Uganda: difference-in-differences model for measuring risk reduction, Uganda, Africa, Engineering, original research This work contributes a formal specification, transparent assumptions, and mathematically interpretable claims. The maintenance outcome was modelled as $Y_i = \beta_0 + \beta_1 X_i + u_i + \epsilon_i$, with robustness checked using heteroskedasticity-consistent errors.
