Abstract

This study addresses a current research gap in Medicine concerning Assessment of a clinical decision support algorithm for antenatal care on pre-eclampsia detection and management in primary health centers in Enugu State, Nigeria in Nigeria. The objective is to clarify key debates, identify practical implications, and outline a focused agenda for scholarship and policy. A qualitative approach was used, drawing on recent literature and policy sources to frame the analysis. The analysis indicates persistent structural constraints alongside emerging local innovations; however, evidence remains uneven across contexts and sectors. The paper argues for context-specific approaches and stronger empirical foundations in future research. Stakeholders should prioritise inclusive, locally grounded strategies and improve data transparency. Assessment of a clinical decision support algorithm for antenatal care on pre-eclampsia detection and management in primary health centers in Enugu State, Nigeria, Nigeria, Africa, Medicine, data descriptor This structured abstract provides a standardised summary to support rapid screening, indexing, and assessment of scholarly contribution.

Keywords: *Pre-eclampsia, Clinical decision support systems, Antenatal care, Primary health care, Sub-Saharan Africa*
