Abstract

This study addresses a current research gap in Medicine concerning Impact of a community-based kangaroo mother care promotion program on neonatal survival among low-birth-weight infants in rural Bangladesh of Ethiopia in Ethiopia. The objective is to clarify key debates, identify practical implications, and outline a focused agenda for scholarship and policy. A structured review of relevant literature was conducted, with thematic synthesis of key findings. The analysis indicates persistent structural constraints alongside emerging local innovations; however, evidence remains uneven across contexts and sectors. The paper argues for context-specific approaches and stronger empirical foundations in future research. Stakeholders should prioritise inclusive, locally grounded strategies and improve data transparency. Impact of a community-based kangaroo mother care promotion program on neonatal survival among low-birth-weight infants in rural Bangladesh of Ethiopia, Ethiopia, Africa, Medicine, meta analysis This structured abstract provides a standardised summary to support rapid screening, indexing, and assessment of scholarly contribution.

Keywords: Kangaroo mother care, Neonatal survival, Low-birth-weight infants, Community-based intervention, Sub-Saharan Africa, Meta-analysis
