Abstract

This study addresses a current research gap in Medicine concerning Measuring the effect of integrating HPV self-sampling into routine mobile HIV testing on cervical cancer screening uptake among women aged 30-49 in Blantyre, Malawi in Malawi. The objective is to clarify key debates, identify practical implications, and outline a focused agenda for scholarship and policy. A structured review of relevant literature was conducted, with thematic synthesis of key findings. The analysis indicates persistent structural constraints alongside emerging local innovations; however, evidence remains uneven across contexts and sectors. The paper argues for context-specific approaches and stronger empirical foundations in future research. Stakeholders should prioritise inclusive, locally grounded strategies and improve data transparency. Measuring the effect of integrating HPV self-sampling into routine mobile HIV testing on cervical cancer screening uptake among women aged 30-49 in Blantyre, Malawi, Malawi, Africa, Medicine, review article This structured abstract provides a standardised summary to support rapid screening, indexing, and assessment of scholarly contribution.

Keywords: *Human papillomavirus, self-sampling, cervical cancer screening, HIV services integration, Sub-Saharan Africa, health services accessibility, Malawi*
