Abstract

Cultural heritage preservation in West Africa's digital landscape has gained significant attention due to its impact on traditional and modern cultural practices. The research employs a mixed-methods approach involving surveys, interviews, and data analysis to understand current preservation efforts and identify gaps in implementation. A notable finding is that while digital platforms have enhanced access to cultural resources, there is a significant underutilization of these tools for traditional knowledge sharing among younger generations. The study concludes with recommendations aimed at integrating technology more effectively into cultural preservation strategies and increasing youth engagement in heritage management. Recommendations include the development of digital curricula that incorporate cultural content, fostering community-led initiatives to leverage digital tools for heritage maintenance, and enhancing public awareness campaigns about the importance of preserving cultural artifacts through digital means.
