Abdelmalek Mahamat is affiliated with University of N'Djamena and focuses on Psychology research in Africa.

Abstract

Comparative psychology studies in African regions, such as Chad, offer a unique lens into cultural and contextual dynamics that influence developmental processes. Qualitative research methods were employed to gather data through interviews, focus group discussions, and observations in various communities throughout Chad. Chad's unique socio-environmental factors present both challenges and opportunities for psychological development that differ from more settled societies. Further research should focus on longitudinal studies to track developmental trajectories over time, considering the dynamic nature of life in Chad.

Keywords: *African geography, contextual psychology, developmental theory, qualitative methods, cultural neuroscience, cross-cultural comparison, ethnomethodology*

ABSTRACT-ONLY PUBLICATION

This is an abstract-only publication. The complete research paper with full methodology, results, discussion, and references is available upon request.
