Author notes

Zewde Abera is affiliated with Addis Ababa University and focuses on African Studies research in Africa.

Fikru Abay is affiliated with Debre Markos University and focuses on African Studies research in Africa.

Mulu Tesfaye is affiliated with Africa Centers for Disease Control and Prevention (Africa CDC), Addis Ababa and focuses on African Studies research in Africa.

Berhanu Berihu is affiliated with Department of Interdisciplinary Studies, Africa Centers for Disease Control and Prevention (Africa CDC), Addis Ababa and focuses on African Studies research in Africa.

Abstract

The Sahelian region of Ethiopia is facing significant climate variability, which has profound implications for human security across various sectors including agriculture, health, and livelihoods. The theoretical framework is developed through a review of existing literature on climate change impacts, vulnerability assessments, and resilience studies within African contexts. The theoretical framework presented offers a robust foundation for understanding and addressing human security challenges exacerbated by climate change in the Sahelian region of Ethiopia. Policy recommendations include integrating early warning systems with agricultural insurance schemes to enhance resilience against climatic shocks.

Keywords: *Sahelian, Sahel, Climate Variability, Human Security, Anthropocene, Ecocentrism, Pan-African Studies*

ABSTRACT-ONLY PUBLICATION

This is an abstract-only publication. The complete research paper with full methodology, results, discussion, and references is available upon request.
