Abstract

Senegal has faced several epidemics in recent years, necessitating robust health system responses. A qualitative approach focusing on policy documents, interviews with healthcare professionals, and secondary data analysis. The Senegalese approach highlights effective resource management and workforce development as key to epidemic resilience. Adopting similar strategies could enhance preparedness for future health crises in other African countries.

Keywords: *African geography, health systems resilience, epidemic response, qualitative research, policy analysis, public health ethics, community engagement*
