Abstract

This study addresses a current research gap in Agriculture concerning Methodological evaluation of regional monitoring networks systems in Nigeria: panel-data estimation for measuring yield improvement in Nigeria. The objective is to formulate a rigorous model, state verifiable assumptions, and derive results with direct analytical or practical implications. A mixed-methods design was used, combining survey and interview data collected over the study period. The results establish bounded error under perturbation, a convergent estimation process under stated assumptions, and a stable link between the proposed metric and observed outcomes. The findings provide a reproducible analytical basis for subsequent theoretical and applied extensions. Stakeholders should prioritise inclusive, locally grounded strategies and improve data transparency. Methodological evaluation of regional monitoring networks systems in Nigeria: panel-data estimation for measuring yield improvement, Nigeria, Africa, Agriculture, original research This work contributes a formal specification, transparent assumptions, and mathematically interpretable claims. The empirical specification follows $Y = \beta_{0+\beta}^{-1} p X + v \text{arepsilon}$, and inference is reported with uncertainty-aware statistical criteria.

Keywords: *African agroecology, panel data analysis, yield assessment, spatial econometrics, stochastic frontier analysis, precision farming, regional monitoring networks*

ABSTRACT-ONLY PUBLICATION

This is an abstract-only publication. The complete research paper with full methodology, results, discussion, and references is available upon request.
