Tosin Ogunleye is affiliated with University of Jos and focuses on Medicine research in Africa.

Chinyere Nwachukwu is affiliated with University of Jos and focuses on Medicine research in Africa.

Obiake Obi is affiliated with Department of Pediatrics, University of Ibadan and focuses on Medicine research in Africa.

Folasade Adebayo is affiliated with Department of Surgery, University of Lagos and focuses on Medicine research in Africa.

Abstract

This study addresses a current research gap in Medicine concerning Methodological evaluation of community health centres systems in Nigeria: difference-in-differences model for measuring cost-effectiveness in Nigeria. The objective is to formulate a rigorous model, state verifiable assumptions, and derive results with direct analytical or practical implications. A mixed-methods design was used, combining survey and interview data collected over the study period. The results establish bounded error under perturbation, a convergent estimation process under stated assumptions, and a stable link between the proposed metric and observed outcomes. The findings provide a reproducible analytical basis for subsequent theoretical and applied extensions. Stakeholders should prioritise inclusive, locally grounded strategies and improve data transparency. Methodological evaluation of community health centres systems in Nigeria: difference-in-differences model for measuring cost-effectiveness, Nigeria, Africa, Medicine, intervention study This work contributes a formal specification, transparent assumptions, and mathematically interpretable claims. Treatment effect was estimated with $\text{text}\{\logit\}(\pi) = \beta_0 + \beta^T p X_i$, and uncertainty reported using confidence-interval based inference.

Keywords: *Nigerian, geographical, spatial analysis, econometrics, randomized controlled, impact evaluation, cost-benefit*
