*Ahmed El Ouahabi is affiliated with Department of Research, National Center for Scientific and Technical Research (CNRST) and focuses on Energy research in Africa.*

### Abstract

This review explores recent books on geopolitics in North African energy security, with a specific focus on Morocco. No empirical data or statistical analysis was conducted as this review focuses on summarizing existing literature. Themes include shifts in geopolitical influences, changes in energy supply patterns, and impacts on national security policies. The reviewed books collectively contribute to a nuanced understanding of Morocco's evolving energy landscape under shifting global dynamics. Further research should focus on long-term policy implications and potential for renewable energy integration. The empirical specification follows  $Y = \beta_{0+\beta}^{\rightarrow} p X + \text{varepsilon}$ , and inference is reported with uncertainty-aware statistical criteria.

**Keywords:** *North Africa, geopolitics, energy security, regional dynamics, power transition, statecraft, international relations*
