# | Abstract

This study addresses a current research gap in Medicine concerning Comparative Medicine Studies in African Regions in Central African Republic. The objective is to clarify key debates, identify practical implications, and outline a focused agenda for scholarship and policy. A qualitative approach was used, drawing on recent literature and policy sources to frame the analysis. The analysis indicates persistent structural constraints alongside emerging local innovations; however, evidence remains uneven across contexts and sectors. The paper argues for context-specific approaches and stronger empirical foundations in future research. Stakeholders should prioritise inclusive, locally grounded strategies and improve data transparency. Comparative Medicine Studies in African Regions, Central African Republic, Africa, Medicine, case study
