# | Abstract

This study addresses a current research gap in Engineering concerning Gender Dimensions of Engineering in Sub-Saharan Africa in Libya. The objective is to clarify key debates, identify practical implications, and outline a focused agenda for scholarship and policy. A qualitative approach was used, drawing on recent literature and policy sources to frame the analysis. The analysis indicates persistent structural constraints alongside emerging local innovations; however, evidence remains uneven across contexts and sectors. The paper argues for context-specific approaches and stronger empirical foundations in future research. Stakeholders should prioritise inclusive, locally grounded strategies and improve data transparency. Gender Dimensions of Engineering in Sub-Saharan Africa, Libya, Africa, Engineering, brief report This structured abstract provides a standardised summary to support rapid screening, indexing, and assessment of scholarly contribution.
