Author notes

Ibrahimm Baldé is affiliated with Department of Advanced Studies, Université Alioune Diop de Bambey (UADB) and focuses on Environmental Science research in Africa.

Aminata Sylla is affiliated with Université Gaston Berger (UGB), Saint-Louis and focuses on Environmental Science research in Africa.

Abstract

This study addresses a current research gap in Environmental Science concerning Water Conservation Techniques Implementation Among Urban Families in Dakar, Senegal: Two-Year Impact on Water Consumption Patterns in Senegal. The objective is to formulate a rigorous model, state verifiable assumptions, and derive results with direct analytical or practical implications. A mixed-methods design was used, combining survey and interview data collected over the study period. The results establish bounded error under perturbation, a convergent estimation process under stated assumptions, and a stable link between the proposed metric and observed outcomes. The findings provide a reproducible analytical basis for subsequent theoretical and applied extensions. Stakeholders should prioritise inclusive, locally grounded strategies and improve data transparency. Water Conservation Techniques Implementation Among Urban Families in Dakar, Senegal: Two-Year Impact on Water Consumption Patterns, Senegal, Africa, Environmental Science, intervention study This work contributes a formal specification, transparent assumptions, and mathematically interpretable claims. The empirical specification follows $Y = \beta_{\alpha+\beta} X + \text{varepsilon}$, and inference is reported with uncertainty-aware statistical criteria.
