Yaw Gyamfi is affiliated with Department of Pediatrics, Noguchi Memorial Institute for Medical Research and focuses on Medicine research in Africa.

Ameyaw Asare is affiliated with Department of Epidemiology, Council for Scientific and Industrial Research (CSIR-Ghana) and focuses on Medicine research in Africa.

Kwame Agyei is affiliated with Noguchi Memorial Institute for Medical Research and focuses on Medicine research in Africa.

Abstract

This study addresses a current research gap in Medicine concerning Methodological evaluation of public health surveillance systems systems in Ghana: quasi-experimental design for measuring clinical outcomes in Ghana. The objective is to formulate a rigorous model, state verifiable assumptions, and derive results with direct analytical or practical implications. A mixed-methods design was used, combining survey and interview data collected over the study period. The results establish bounded error under perturbation, a convergent estimation process under stated assumptions, and a stable link between the proposed metric and observed outcomes. The findings provide a reproducible analytical basis for subsequent theoretical and applied extensions. Stakeholders should prioritise inclusive, locally grounded strategies and improve data transparency. Methodological evaluation of public health surveillance systems systems in Ghana: quasi-experimental design for measuring clinical outcomes, Ghana, Africa, Medicine, original research This work contributes a formal specification, transparent assumptions, and mathematically interpretable claims. Treatment effect was estimated with $\text{text}\{\text{logit}\}(\pi) = \beta_0 + \beta^T p X_i$, and uncertainty reported using confidence-interval based inference.
