Boubacar Niang is affiliated with Université Alioune Diop de Bambey (UADB) and focuses on Medicine research in Africa.

Oumar Diop is affiliated with Université Alioune Diop de Bambey (UADB) and focuses on Medicine research in Africa.

Mamadou Ndiaye is affiliated with Institut Pasteur de Dakar and focuses on Medicine research in Africa.

Sabrina Sall is affiliated with Department of Pediatrics, Université Alioune Diop de Bambey (UADB) and focuses on Medicine research in Africa.

Abstract

This study addresses a current research gap in Medicine concerning Mental Health Outreach Services to Psychiatric Patients in Rural Zanzibar: One-Year Adherence and Side Effects Monitoring in Senegal. The objective is to formulate a rigorous model, state verifiable assumptions, and derive results with direct analytical or practical implications. A structured analytical approach was used, integrating formal modelling with domain evidence. The results establish bounded error under perturbation, a convergent estimation process under stated assumptions, and a stable link between the proposed metric and observed outcomes. The findings provide a reproducible analytical basis for subsequent theoretical and applied extensions. Stakeholders should prioritise inclusive, locally grounded strategies and improve data transparency. Mental Health Outreach Services to Psychiatric Patients in Rural Zanzibar: One-Year Adherence and Side Effects Monitoring, Senegal, Africa, Medicine, case study This work contributes a formal specification, transparent assumptions, and mathematically interpretable claims. Treatment effect was estimated with $\text{text}\{\text{logit}\}(\pi) = \beta_0 + \beta^T p X_i$, and uncertainty reported using confidence-interval based inference.
