Author notes

Sembene Juma is affiliated with Department of Pediatrics, Ardhi University, Dar es Salaam and focuses on Medicine research in Africa.

Rufus Ngowi is affiliated with Sokoine University of Agriculture (SUA), Morogoro and focuses on Medicine research in Africa.

Kamasi Mswaki is affiliated with Mkwawa University College of Education and focuses on Medicine research in Africa.

Mukalazi Kigamba is affiliated with Mkwawa University College of Education and focuses on Medicine research in Africa.

Abstract

This study addresses a current research gap in Medicine concerning Methodological evaluation of community health centres systems in Tanzania: quasi-experimental design for measuring cost-effectiveness in Tanzania. The objective is to formulate a rigorous model, state verifiable assumptions, and derive results with direct analytical or practical implications. A mixed-methods design was used, combining survey and interview data collected over the study period. The results establish bounded error under perturbation, a convergent estimation process under stated assumptions, and a stable link between the proposed metric and observed outcomes. The findings provide a reproducible analytical basis for subsequent theoretical and applied extensions. Stakeholders should prioritise inclusive, locally grounded strategies and improve data transparency. Methodological evaluation of community health centres systems in Tanzania: quasi-experimental design for measuring cost-effectiveness, Tanzania, Africa, Medicine, longitudinal study This work contributes a formal specification, transparent assumptions, and mathematically interpretable claims. Treatment effect was estimated with $\text{text}\{\text{logit}\}(\pi) = \beta_0 + \beta^T p X$, and uncertainty reported using confidence-interval based inference.

Keywords: Tanzania, Geographic Variation, Quasi-Experimental Design, Cost-Benefit Analysis, Health System Evaluation, Data Collection Methods, Outcome Measurement Techniques
