# | Abstract

This study addresses a current research gap in Medicine concerning Post-operative outcomes of endoscopic versus external approach dacryocystorhinostomy for nasolacrimal duct obstruction at a referral center in Nairobi, Kenya in Kenya. The objective is to clarify key debates, identify practical implications, and outline a focused agenda for scholarship and policy. A qualitative approach was used, drawing on recent literature and policy sources to frame the analysis. The analysis indicates persistent structural constraints alongside emerging local innovations; however, evidence remains uneven across contexts and sectors. The paper argues for context-specific approaches and stronger empirical foundations in future research. Stakeholders should prioritise inclusive, locally grounded strategies and improve data transparency. Post-operative outcomes of endoscopic versus external approach dacryocystorhinostomy for nasolacrimal duct obstruction at a referral center in Nairobi, Kenya, Kenya, Africa, Medicine, data descriptor This structured abstract provides a standardised summary to support rapid screening, indexing, and assessment of scholarly contribution.
