| Abstract

This study addresses a current research gap in Medicine concerning Adoption of a narrow-band imaging classification system for predicting histology of colorectal polyps in a training program for endoscopists in Ghana in Ghana. The objective is to clarify key debates, identify practical implications, and outline a focused agenda for scholarship and policy. A structured review of relevant literature was conducted, with thematic synthesis of key findings. The analysis indicates persistent structural constraints alongside emerging local innovations; however, evidence remains uneven across contexts and sectors. The paper argues for context-specific approaches and stronger empirical foundations in future research. Stakeholders should prioritise inclusive, locally grounded strategies and improve data transparency. Adoption of a narrow-band imaging classification system for predicting histology of colorectal polyps in a training program for endoscopists in Ghana, Ghana, Africa, Medicine, review article This structured abstract provides a standardised summary to support rapid screening, indexing, and assessment of scholarly contribution.
