Abstract

This study addresses a current research gap in Medicine concerning Methodological evaluation of district hospitals systems in Uganda: difference-in-differences model for measuring adoption rates in Uganda. The objective is to formulate a rigorous model, state verifiable assumptions, and derive results with direct analytical or practical implications. A structured analytical approach was used, integrating formal modelling with domain evidence. The results establish bounded error under perturbation, a convergent estimation process under stated assumptions, and a stable link between the proposed metric and observed outcomes. The findings provide a reproducible analytical basis for subsequent theoretical and applied extensions. Stakeholders should prioritise inclusive, locally grounded strategies and improve data transparency. Methodological evaluation of district hospitals systems in Uganda: difference-in-differences model for measuring adoption rates, Uganda, Africa, Medicine, working paper This work contributes a formal specification, transparent assumptions, and mathematically interpretable claims. Treatment effect was estimated with $\text{text}\{logit\}(\pi) = \beta_0 + \beta_1 p X_i$, and uncertainty reported using confidence-interval based inference.

Keywords: Uganda, District Hospitals, Adoption Rates, Difference-in-Differences, Randomized Controlled Trials, Public Health, Epidemiology
