Abstract

This study addresses a current research gap in Medicine concerning Gender Dimensions of Medicine in Sub-Saharan Africa in Central African Republic. The objective is to clarify key debates, identify practical implications, and outline a focused agenda for scholarship and policy. A mixed-methods design was used, combining survey and interview data collected over the study period. The analysis indicates persistent structural constraints alongside emerging local innovations; however, evidence remains uneven across contexts and sectors. The paper argues for context-specific approaches and stronger empirical foundations in future research. Stakeholders should prioritise inclusive, locally grounded strategies and improve data transparency. Gender Dimensions of Medicine in Sub-Saharan Africa, Central African Republic, Africa, Medicine, mixed methods study This structured abstract provides a standardised summary to support rapid screening, indexing, and assessment of scholarly contribution.

Keywords: *Mixed methods, Gender, Healthcare access, Sub-Saharan Africa, Clinical outcomes*
