Author notes

Kinyanjui Kimani is affiliated with Department of Public Health, Kenya Agricultural and Livestock Research Organization (KALRO) and focuses on Medicine research in Africa.

Okoth Okeyo is affiliated with Strathmore University and focuses on Medicine research in Africa.

Wambugu Kiplangat is affiliated with Department of Public Health, African Population and Health Research Center (APHRC) and focuses on Medicine research in Africa.

Oluoch Mwangi is affiliated with Kenya Agricultural and Livestock Research Organization (KALRO) and focuses on Medicine research in Africa.

Abstract

This study addresses a current research gap in Medicine concerning Methodological evaluation of community health centres systems in Kenya: time-series forecasting model for measuring yield improvement in Kenya. The objective is to formulate a rigorous model, state verifiable assumptions, and derive results with direct analytical or practical implications. A mixed-methods design was used, combining survey and interview data collected over the study period. The results establish bounded error under perturbation, a convergent estimation process under stated assumptions, and a stable link between the proposed metric and observed outcomes. The findings provide a reproducible analytical basis for subsequent theoretical and applied extensions. Stakeholders should prioritise inclusive, locally grounded strategies and improve data transparency. Methodological evaluation of community health centres systems in Kenya: time-series forecasting model for measuring yield improvement, Kenya, Africa, Medicine, original research This work contributes a formal specification, transparent assumptions, and mathematically interpretable claims. Treatment effect was estimated with $text\{logit\}(\pi) = beta\,0 + \beta^{\neg} p\, X_i$, and uncertainty reported using confidence-interval based inference.

Keywords: *African geography, Community healthcare systems, Forecasting models, Methodology evaluation, Time-series analysis, Yield measurement, Epidemiology*
