Abstract

Mobile health clinics have been introduced in rural areas of Ghana to improve access to reproductive health services for women. A comprehensive review of existing literature was conducted, analysing metrics such as clinic visit frequency and patient satisfaction surveys. Mobile clinics reported a significant increase in overall use by 30% compared to baseline data, with particular emphasis on contraceptive services. The findings suggest that mobile health clinics have effectively enhanced access and utilization of reproductive health services among rural women in Ghana. Continued investment in mobile clinic infrastructure and training for healthcare providers is recommended to sustain these positive outcomes. Mobile Health Clinics, Reproductive Health Services, Rural Access, Service Utilization

Keywords: *Geographical Indicators, Mobile Health, Access Metrics, Service Utilization, Reproductive Health Services, Cross-Cultural Studies, Quantitative Research*
