## Abstract

The study examines Ghana's health systems' response to epidemics within the broader context of African studies. A qualitative approach was employed to review existing literature, government reports, and interviews with key stakeholders involved in epidemic response efforts in Ghana. Ghana's health system demonstrated significant flexibility by reallocating resources from routine operations to epidemic containment within a month of an outbreak announcement. The findings underscore the importance of proactive planning, resource allocation strategies, and effective communication as key elements for enhancing health systems' resilience during epidemics. Ghana should prioritise cross-sectoral collaboration, continuous training for healthcare workers, and developing robust early warning systems to mitigate future epidemic impacts.
